BeoLab 8000

Guide
For the US-market only!

NOTE: This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

WARNING: To reduce the risk of fire or electric shock, do not expose this appliance to rain or moisture. Do not expose this equipment to dripping or splashing and ensure that no objects filled with liquids, such as vases, are placed on the equipment.

To completely disconnect this equipment from the AC Mains, disconnect the power supply cord plug from the AC receptacle.

The lightning flash with arrowhead symbol within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.
Once you have assembled the speakers they are ready for connection to the audio system (or video system), and to the mains (see assembly instructions on the enclosed instruction sheet).

**Placement**
The BeoLab 8000 occupies very little space on the floor. In fact, it can be placed wherever it is most convenient for your room layout, and for your preferred listening position.

*The BeoLab 8000 is designed for use in dry environments only!*

*The four rubber feet should be mounted on the base*
Connect the BeoLab 8000 and the audio system (or video system) using the enclosed 8-pin Power Link cable. Plug one end into the Power Link socket on the speaker, and the other end into either of the two Power Link sockets on the audio/video system.

Once you have connected the speakers, the switch underneath the Power Link socket on the BeoLab 8000 must be set to L or R: L for the left-hand speaker, R for the right-hand speaker.

Finally, connect the speakers to the mains using the enclosed mains lead. To secure the mains cord from being disconnected, we advise you to tie the mains cord to the black lid with the enclosed cable-tie (A).

The phono socket underneath the switch must be used instead of the Power Link socket if the BeoLab 8000 is to be connected to a non-Bang & Olufsen product. In this case, the switch must be set to LINE.

Note: The type number of the BeoLab 8000 speaker appears on the label which is placed on the inside of the socket panel cover.
The rubber tube packed with the speaker is a cable cover specially designed for the BeoLab 8000. Use the enclosed tool to “zip up” the cable cover when you have placed both the mains cord and the Power Link cable inside it.

You may connect more than one pair (as many as ten pairs, in fact) of BeoLab 8000 speakers to your audio or video system.

The special adaptor, part no. 6270706, can be used to connect additional pairs of BeoLab 8000 speakers to your Bang & Olufsen system. The adaptor is available as an optional accessory from your Bang & Olufsen dealer.
The moment you connect the speaker to the mains, a tiny red light appears immediately above the con, behind the cloth, indicating the speaker is on stand-by.

When you switch on your Bang & Olufsen system, the BeoLab 8000 speakers switch on simultaneously.

The red stand-by light turns green, indicating that the speaker is switched on.

When you switch off your system, or when you mute the sound, the red light appears immediately, indicating that the speakers are switched off.

If the BeoLab 8000 speakers are connected to a non-Bang & Olufsen system, via the phono sockets, they switch on when they receive a signal from the system. They switch off a few minutes after the signal has disappeared.
Maintenance

Clean the BeoLab 8000 speakers using a soft, firmly wrung lint-free cloth which you have dipped in a solution of lukewarm water containing a few drops of mild detergent, e.g. a dish washing liquid.

We recommend that you remove any dust on the black base using a soft brush before you clean it with a sponge.

*Note: Never use alcohol or other solvents to clean the BeoLab 8000 speakers!*

This product fulfils the conditions stated in the EEU directives 89/336 and 73/23.
